

Step 5: Write Visualforce Code

The screenshot shows the Salesforce Developer Console with the Visualforce code for a calculator page. The code is as follows:

```
16 <apex:form id="calcForm">
17   <apex:actionFunction name="addNumber" action="{!appendNumber}" rerender="displayPanel">
18     <apex:param name="num" assignTo="{!inputChar}" value=""/>
19   </apex:actionFunction>
20
21   <apex:actionFunction name="addOperator" action="{!setOperator}" rerender="displayPanel">
22     <apex:param name="op" assignTo="{!inputChar}" value=""/>
23   </apex:actionFunction>
24
25   <apex:actionFunction name="doScientific" action="{!scientificFunction}" rerender="displayPanel">
26     <apex:param name="func" assignTo="{!inputChar}" value=""/>
27   </apex:actionFunction>
28
29   <apex:actionFunction name="doCalculate" action="{!calculate}" rerender="displayPanel"/>
30   <apex:actionFunction name="doClear" action="{!clear}" rerender="displayPanel"/>
31   <apex:actionFunction name="doBackspace" action="{!backspace}" rerender="displayPanel"/>
32
33   <apex:outputPanel id="displayPanel">
34     <div class="display">{!displayValue}</div>
35   </apex:outputPanel>
36
```

Part 3: Run the Application

Step 6: Preview Page

- Click Preview button

Step 7: Use Calculator

- Enter two numbers
- Select operation
- Click Calculate
- View result

9. Conclusion:

This assignment helped in understanding how to build applications in Salesforce using Apex and Visualforce. It demonstrated how backend logic and frontend UI work together
