Create a resource group

BasicsTagsReview + create

Resource group - A container that holds related resources for an Azure solution. The resource group can include all the resources for the solution, or only those resources that you want to manage as a group. You decide how you want to allocate resources to resource groups based on what makes the most sense for your organization. [Learn more](#)

The screenshot shows the Microsoft Azure Marketplace page for the 'Static Web App' service. The header includes the Microsoft Azure logo, a search bar, and user information. The main content area features the 'Static Web App' card with a 3.8 rating and a 'Create' button. Below the card, there is a section titled 'More products from Microsoft' with four tiles: 'Active Directory Health Check', 'AD Replication Status', 'Device Update for IoT Hub', and 'Front Door and CDN profiles'. The bottom of the page has a 'Give feedback' button.

Subscription: Azure for Students Plan: Static Web App [Create](#)

[Overview](#) [Plans](#) [Usage Information + Support](#) [Ratings + Reviews](#)

With Static Web Apps, you can automatically build and deploy full-stack web apps to Azure from a code repository. Your static content—like HTML, CSS, JavaScript, and images—is globally distributed from points around the world instead of a traditional web server, so files are closer to end users. You can even include integrated serverless APIs using Azure Functions or leverage Server Side Rendering.

More products from Microsoft [See All](#)

 Active Directory Health Check Microsoft Azure Service Assess the risk and health of Active Directory.	 AD Replication Status Microsoft Azure Service Identify Active Directory replication issues in your environment.	 Device Update for IoT Hub Microsoft Azure Service Securely and Reliably update your devices with Device Update for IoT.	 Front Door and CDN profiles Microsoft Azure Service Azure Front Door and CDN profiles is security led, modern cloud CDN that

Select **GitHub**. Sign in with **GitHub**.

Authorize Azure to access your repositories.

Select your **Organization**, **Repository**, and **Branch** (usually main).

The screenshot shows the 'Create Static Web App' page in the Microsoft Azure portal. The page is titled 'Create Static Web App' and has a breadcrumb trail: Home > Create a resource > Marketplace > Static Web App. The 'Deployment details' section is active, showing the 'Source' as 'GitHub'. The 'GitHub account' is 'Pratham-ghadge', with a 'Change account' button. A message box states: 'If you can't find an organization or repository, you might need to enable additional permissions on GitHub. You must have write access to your chosen repository to deploy with GitHub Actions.' Below this, the 'Organization' is 'Pratham-ghadge', the 'Repository' is 'CLOUDX', and the 'Branch' is 'main'. The 'Build Details' section shows 'Build Presets' as 'React (detected)' and 'App location' as '/'. At the bottom, there are buttons for 'Review + create', '< Previous', and 'Next : Deployment configuration >'.

The screenshot shows the 'Create Static Web App' page in the Microsoft Azure portal, specifically the 'Deployment configuration' section. The page has a breadcrumb trail: Home > Static Web Apps. The 'Deployment configuration' section is active, showing 'Deployment authorization policy' as 'GitHub'. At the bottom, there are buttons for 'Review + create', '< Previous', and 'Next : Advanced >'.

Advanced Networking:

- Check **Allowed Region Policy** to ensure compliance with Azure's student sandbox restrictions.

The screenshot shows the 'Create Static Web App' wizard in the Microsoft Azure portal, specifically the 'Advanced' tab. The interface includes a top navigation bar with the Microsoft Azure logo, a search bar, and a user profile. The main content area has tabs for 'Basics', 'Deployment configuration', 'Advanced', 'Tags', and 'Review + create'. The 'Advanced' tab is active, displaying information about Azure Functions and staging details. A dropdown menu for 'Region for Azure Functions API and staging environments' is set to 'East Asia'. Below this, there is a section for 'Enterprise-grade edge' with a checkbox that is currently unchecked. A blue information box at the bottom states: 'Enterprise-grade edge requires a standard hosting plan. [Change hosting plan](#)'. At the bottom of the wizard, there are three buttons: 'Review + create' (highlighted in blue), '< Previous', and 'Next: Tags >'.

Finalize: Click Review + Create.

The screenshot shows the 'Create Static Web App' wizard in the Microsoft Azure portal, specifically the 'Review + create' tab. The interface includes a top navigation bar with the Microsoft Azure logo, a search bar, and a user profile. The main content area has tabs for 'Basics', 'Deployment configuration', 'Advanced', 'Tags', and 'Review + create'. The 'Review + create' tab is active, displaying a 'Summary' section with a 'Static Web App' icon and the text 'by Microsoft'. Below this is a 'Details' section with a table of configuration parameters. At the bottom of the wizard, there are four buttons: 'Create' (highlighted in blue), '< Previous', 'Next >', and 'Download a template for automation'.

Phase 4: Automation & Deployment (The "Trigger")

Once created, Azure automatically injects a workflow file into your GitHub repository.

1. **GitHub Actions:** Go to your GitHub Repository **Actions** tab.
2. **Workflow Execution:** You will see a live "Job" running. This is the **CI/CD pipeline** compiling your code and pushing it to Azure servers.

3. **Deployment Success:** Once the green checkmark appears in GitHub, return to the Azure Portal.

Once Azure displays the "Deployment Succeeded" message, follow these steps to verify the cloud environment.

1. **Resource Navigation:** Click the **Go to resource** button to open the Static Web App Management dashboard.

Conclusion :

By utilizing the **Azure Student Developer Pack**, this project successfully demonstrates a modern **DevOps workflow**. By decoupling the frontend hosting from a traditional server and using a **CI/CD pipeline**, we ensure that the deployment process is bug-free, automated, and highly scalable for future enhancements.
